FinTruvix

Trader Edition

Trade with Proof Follow with Control

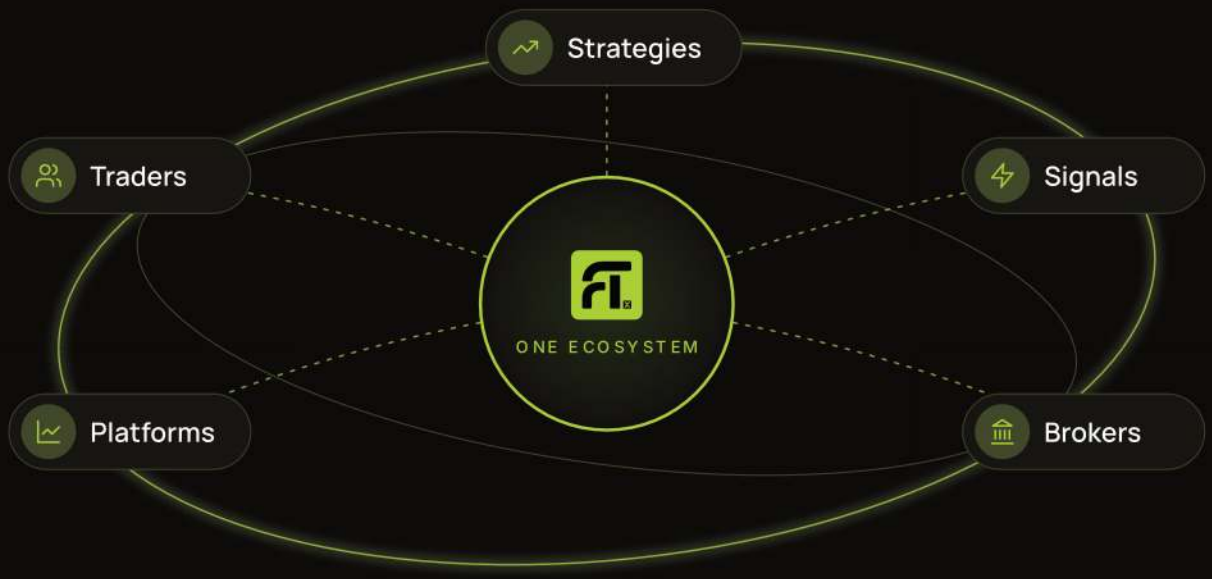

A cross broker, cross platform social trading operating system
built around verified identity, transparent performance, and configurable risk

What is FinTruvix?

Connected Beyond Platform Boundaries

FinTruvix brings traders, strategies, signals, brokers, and supported trading platforms into one controlled ecosystem

01

Cross platform copy trading

Copy trades between different supported trading platforms without being locked into one technology.

02

Low latency master to copier flow

Built around a sub 20ms p99 execution target on supported low latency integrations.

03

Your capital stays with your broker

FinTruvix does not hold client funds or move money between brokers.

04

Infrastructure, not trade advice

FinTruvix provides the marketplace, scoring, connectivity, and execution layer.

Actual latency varies by broker, platform, network, and infrastructure conditions.

Trader Passport

FinTruvix brings traders, brokers, and financial ecosystems together through one connected platform, providing the technology and tools needed to discover, copy, manage, and grow trading strategies

Passport reference
[FTP-2026-DF-084261]

- Verified identity
- Connected accounts
- Score history
- Conduct record

Permanent
It cannot be deleted, transferred, reset, or given a fresh start.

Complete
Verified identity, roles, accounts, scores, and records.

Portable and shareable
Your verified track record, wherever you go.

T-Score

A Smarter Measure of Trader Trust

Performance is only part of the story. The public 0-100 T-Score combines verified results, integrity, and community validation

Perfomance

Risk adjusted return, consistency, drawdown management, copier profitability, longevity, and win rate.

Integrity

Transparency, behavioural consistency, communication, complaint resolution, and platform conduct.

Validation

Verified community activity weighted by participant tier, rather than raw reaction counts.

Copy Trading

One Strategy | Multiple Brokers

Copy trades across multiple brokers through one connected platform, FinTruvix enables traders to follow and replicate strategies seamlessly while maintaining control across their trading accounts

01

Cross broker access

Follow an eligible strategist even when their trading account is held with another supported broker.

02

Multi strategist diversification

Allocate across several strategists instead of concentrating your entire copy portfolio on one person.

03

Evidence before allocation

Review T-Score, equity curve, monthly heatmap, copier profitability, track record, and fee structure.

04

Compare before you copy

Compare up to three strategies side by side before deciding how to allocate your account.

Copy Execution

Your account | Your sizing | Your limits

Choose how follower volume is calculated instead of accepting a one size fits all setup

01 **Proportional**
Scale by follower equity versus strategist equity.

02 **Fixed lot**
Use the same absolute lot size on every copied trade.

03 **Equity percent**
Allocate a fixed percentage of available equity.

04 **Risk multiplier**
Adjust strategist risk from 0.1x to 3x.

05 **Reverse copy**
Copy the opposite direction for hedging or contrarian use.

FIVE CONFIGURABLE COPY METHODS

Risk Controls

Risk First

Every attempted copied order passes three levels of control. Follower settings, broker rules, and platform safeguards are checked before an order is submitted

Attempted copied order

LEVEL 1

You control

Set a drawdown stop, daily loss limit, maximum position size, and excluded instruments.

LEVEL 2

Broker controls

Your broker can apply copier limits, instrument restrictions, and minimum equity requirements.

LEVEL 3

Platform safeguards

Score freezes, suspensions, platform lot limits, and drawdown protocol checks can block or pause execution.

Order submitted to broker

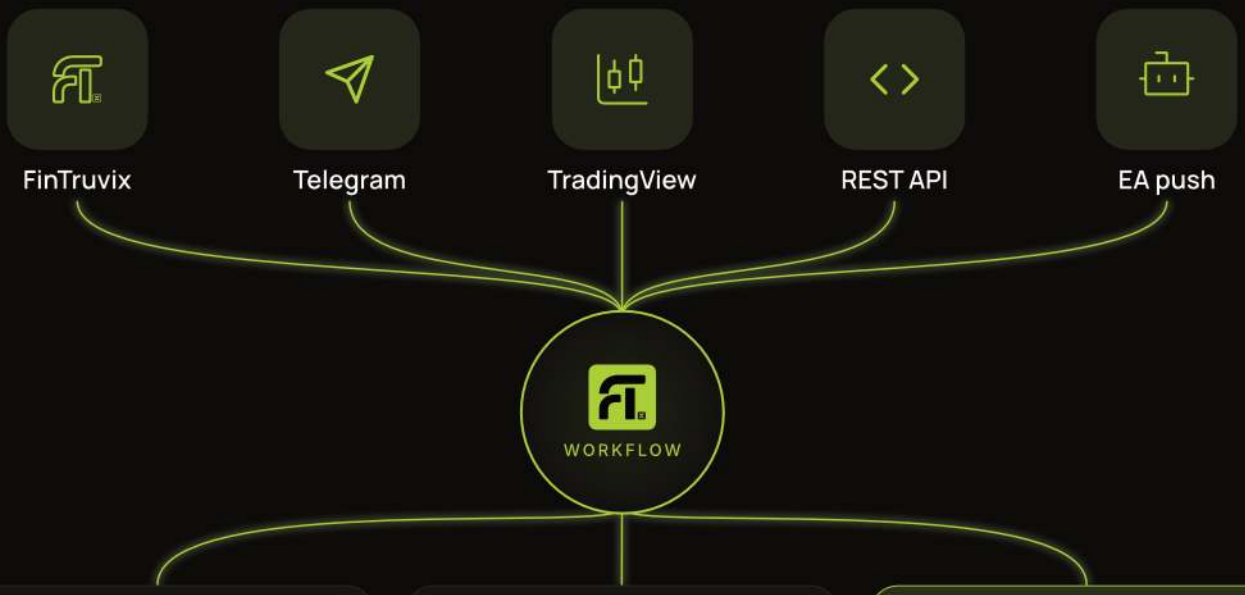

CONTROL DOES NOT REMOVE TRADING RISK

Signals

Receive | Review | Automate

Bring signals into one controlled workflow from native FinTruvix, Telegram, TradingView, REST API, or EA push

MULTIPLE SOURCES

01

Notification only

A push notification arrives, No order is placed, You decide independently.

02

Semi auto

Review the signal and approve it using the Execute button before it expires.

03

Full auto

Route the signal to the execution engine using your pre configured lot size and limits.

SUBSCRIPTION LEVEL CONTROLS

- Lot size per signal
- Daily signal cap
- Maximum open positions
- Account drawdown limit
- Allowed instruments

Strategists

Make Your Performance Portable

Build a reputation that is tied to evidence, not screenshots, claims, or a single broker account

01

Build and share a permanent track record

Your verified Trader Passport carries history, scores, and conduct across supported brokers and can be shared on social media.

02

Earn through flexible models

Offer a free strategy, performance fee, subscription fee, or hybrid model.

03

Progress by evidence

Move from Rookie to Rising, Verified, Elite, and Apex through score thresholds and track record length.

04

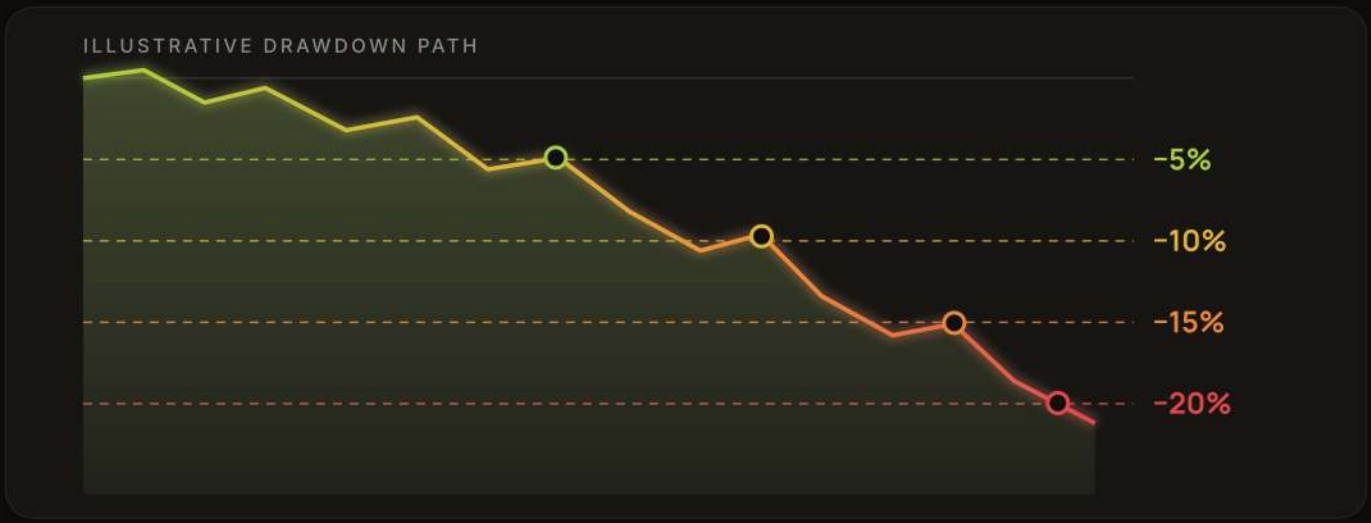

Communicate in public

Use strategy updates, drawdown communication, market analysis, milestones, and live sessions to build trust.

Drawdown Protocol

Silence is a Risk Signal

FinTruvix prompts strategist communication as drawdown deepens, Ignored prompts reduce integrity scoring and trigger review

5%

Communication prompt

Suggested drawdown update.

10%

Strong prompt

Followers see the communication gap.

15%

Mandatory update

The listing displays a warning if the strategist remains silent.

20%

Automatic notice

All followers are notified and a review opens.

Transparency is rewarded, Continued silence is penalised through T-Score reductions and visible platform action.

How It Works

From Identity to Controlled Execution

A clear path designed to make verification, comparison, and risk settings part of the trading decision

01 **Verify your identity**
Complete KYC to create your Trader Passport.

02 **Connect your broker**
Link a supported account while your capital remains at the broker.

03 **Set your boundaries**
Choose allocation, copy method, drawdown stop, daily loss limit, and exclusions.

04 **Explore and compare**
Use verified metrics and side by side strategy comparison.

05 **Follow or subscribe**
Copy a strategist or consume signals in your chosen execution mode.

YOUR PERFORMANCE SHOULD TRAVEL WITH YOU

Build the Record | Earn the Trust | Trade with Control
